

AirTech™ TPMS

AirTech MAKES TPMS AFFORDABLE

SPECIAL: Get our \$700 Pro Tool For Little or No Net Cost *

System - Hybrid Programmable

This is an exciting new technology in our industry. For years, many suppliers have offered "Multiple Protocol" sensors where the protocols are baked into the sensor. Their advantage is fewer sensors to inventory and faster protocol selection. Their disadvantage is when new or improved protocols are added, old parts are obsolete. Programmable's offer a better solution, where new or improved protocols are updated in the tool and immediately available for use and a "TRUE" programmable, is a simple 2 sensor solution. Their only issue, is longer time to program sensors. **Our new "Hybrid Programmable" has multiple baked in protocols AND the tool can wirelessly transfer a new or improved protocols to the AirTech sensor.** The end result, is a single tool activated protocol matched to your vehicle, just like the OE sensor. This is the foundation of our historical reliability.

Pro Tool - Powered by ATEQ

The AT200 is a professional grade industrial tool that exceeds the expectations of today's Retail Tire Store. It features a large bright color display. It can scan single or all sensors on vehicle, reads all sensors, programs our sensors (Even Thru Tire), and it can also clone sensor ID# which eliminates having to perform relearn procedure. It even has all vehicle relearn procedures built in, no more hunting down the right procedure.

We also offer the **Ateq Pro OBDII** relearn module with far more coverage and reliability than the cheap tools in the market today. It comes with a 5 years of free upgrades for active AirTech customers, and AirTech TPMS has programs for free upgrades after 5 years.

Owners of Ateq VT55 or VT56, don't need our tool, you can use your tool to program our sensors. We are working hard to have other popular tools covered soon.

The street value of this tool is more than \$700. **AirTech offers Starter Kit programs with Tool and OBDII at little or no net tool cost to shops. Ask your AirTech TPMS distributor for details. Limit: 1 per store location.**

Sensors - A True 2 Sensor Programmable Solution

This sensor uses the newest IC technology. It is one of the rare sensors that uses a RF welded body, with air as the insulator and not heavy epoxy. Unlike others where on some vehicles must be programmed for use on left or right side... Our sensor, is just like the OE sensor, it sends the correct location signal no matter which side it is located on. AirTech offers a true 2 sensor solution, that's all you have to stock, unlike 31inc Smart Sensor, ITM, or Dorman which have 5 sensors to inventory. AirTech lowers your inventory investment over 50%. Enjoy peace of mind with a sensor that has been used in over 3,000 tire stores. AirTech has over 85% USA coverage.

SENSOR FEATURES

- High Pressure: 130psi / 900Kpa
- FreeScale IC chip. Auto Locate
- Loc On Sync compatible
- Licensed Wireless Programmable
- Re Programmable
- Over 85% USA Coverage

Valves - OE Quality

Choose Your Valve

Snap Rubber Silver Metal Flat Metal Polished Metal

The quality of our valves is unmatched in the aftermarket. Our factory is one of the top 3 valve factories in the world, supplying OE valves to car makers with the highest QC standards.

What's unique about AirTech, is that we sell our sensors valveless. This is a huge advantage for our customers. Why stock so many expensive sensors when the only difference is a inexpensive valve. No more lost sales from not having the perfect valve in stock.

Valveless Sensors - A \$1 Valve has a huge impact On Profit

- AirTech simply thinks it is wrong to charge the same price for a sensor whether it has a rubber or metal valve. Rubber valves are less expensive.
- If you sell Cub programmable, you started with a 2 sensor solution, today you have a 5 sensor solution.
- Cut your inventory investment in half, order what you need, stock a few more valves, and never loose a sale. Increase your inventory turns 200% and save money. That is how a smart shop or distributor works today to increase profit. Think about it, valveless sensors make you more money.

Why Choose AirTech TPMS?

“AirTech Makes TPMS Affordable” - This is NOT just our tag line, it impacts every business decision we make.

AirTech sells TPMS.... Period, Unlike almost every aftermarket TPMS solution, our only focus is on TPMS, Training, Tech Support, Product Development and creating programs that solve problems for Tire Stores.

Our Best Feature is... Value. Of all that we consider when we design our products and programs, none can impact your sales more than our low cost and the total program value we provide to our AirTech TPMS customers.

Valveless Sensors puts money in the bank. Just because others sell sensors with valves attached doesn't make it a good idea. Valveless will cut your inventory cost by 50%, eliminate lost sales, and increase product turns by 200%. These are new profit centers for AirTech TPMS customers.

A \$700 Pro Tool for no net cost* in starter kits. This is a professional, industrial designed, tool from Ateq, known world wide for quality and reliability. It includes 5 years of updates and AirTech has programs for free updates after that. Includes OBDII module. *Limit: one kit per location.

Hybrid Programmable. The best of both worlds. Multi Protocol Sensors and a tool that can wirelessly transfer improved or new protocols. A true Programmable.

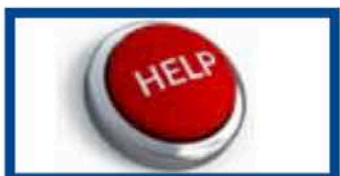

Reliability. For 2 years, over 3,500 tire stores have proven the reliability of our sensors from our factory.

Training. It is critical for our customers to learn best practice techniques. We recognize the importance and value of a structured training program. AirTech is committed to that goal. Look for announcements throughout 2017.

FREE Webinar's: We use webinar's for both training and open Q&A sessions for our customers. This gives everyone a chance to ask what ever questions they have related to TPMS. It's a learning experience for everyone involved.

Tech Support - HELP When You Need It: We understand the urgency of timely Tech Support. We hold ourselves out as TPMS Experts, and it's our job to resolve your issue and educate your staff.
